PROJECTS

- In July 2023, I developed software (MultiBot) for the drop-hunting community Cryptophilos, which processed transactions amounting to \$55,000. MultiBot is a distribution bot that assists in sending any tokens from the OKX exchange to multiple accounts for airdrop promotions.

MultiBot: https://t.me/cryptophilos_multibot

Cryptophilos: <https://t.me/cryptophilos>

- In May 2023, together with IlyaErmi, I developed a high-frequency trading bot for the cryptocurrency market, designed to detect abnormal price spikes on the Binance futures exchange. When the bot identified price surges, it would immediately open a position in the opposite direction, anticipating the price to return to its normal state.

IlyaErmi: <https://www.youtube.com/watch?v=R6-hNB4dn7s>

- In April 2023, I developed a bot for analyzing cryptocurrency and stock markets called MarketBot. The bot utilizes various economic, financial, and market indicators to determine which days are suitable for trading and which ones it's better to refrain from trading due to high market volatility. It analyzes data from different sources, including the global economy, cryptocurrencies, and the American and Asian economies.

GitHub: <https://github.com/tapiskarev/MarketBot>

Project Description: <https://telegra.ph/MarketBot-market-analysis-bot-ENG-08-12>

- In February 2023, I developed an investment bot called InvestBot for the cryptocurrency market. The bot assists users in moderate investment of funds in selected assets on the ByBit exchange. The bot is fully controlled through Telegram, sending charts for traded coins and providing portfolio information to the user.

Project Description: <https://telegra.ph/InvestBot-smart-investing-bot-ENG-08-12>

- In December 2022, I developed a C++ application using the Qt Creator framework - the siTracker portfolio tracker. The application was designed for analyzing a large volume of information recorded in the form of CSV files. Users can upload their trading history from Gate.io and begin tracking the status of their portfolio.

GitHub: <https://github.com/tapiskarev/siTracker>

- In December 2021, as part of a university project, I conducted a descriptive analysis of the price history of the cryptocurrency Bitcoin. This analysis covered the period from 2013 to 2021.

GitHub: <https://github.com/tapiskarev/Bitcoin-Historical-Price>

- In October 2021, I was engaged in fundamental analysis of projects based on a self-developed plan.
